Installation guide

Installation Process

- 1) You need a php server in your hosting machine to run this application
- 2) First extract .zip file to a folder in www directory
- 3) Then enter the url in your browser. then it will start installation procedure

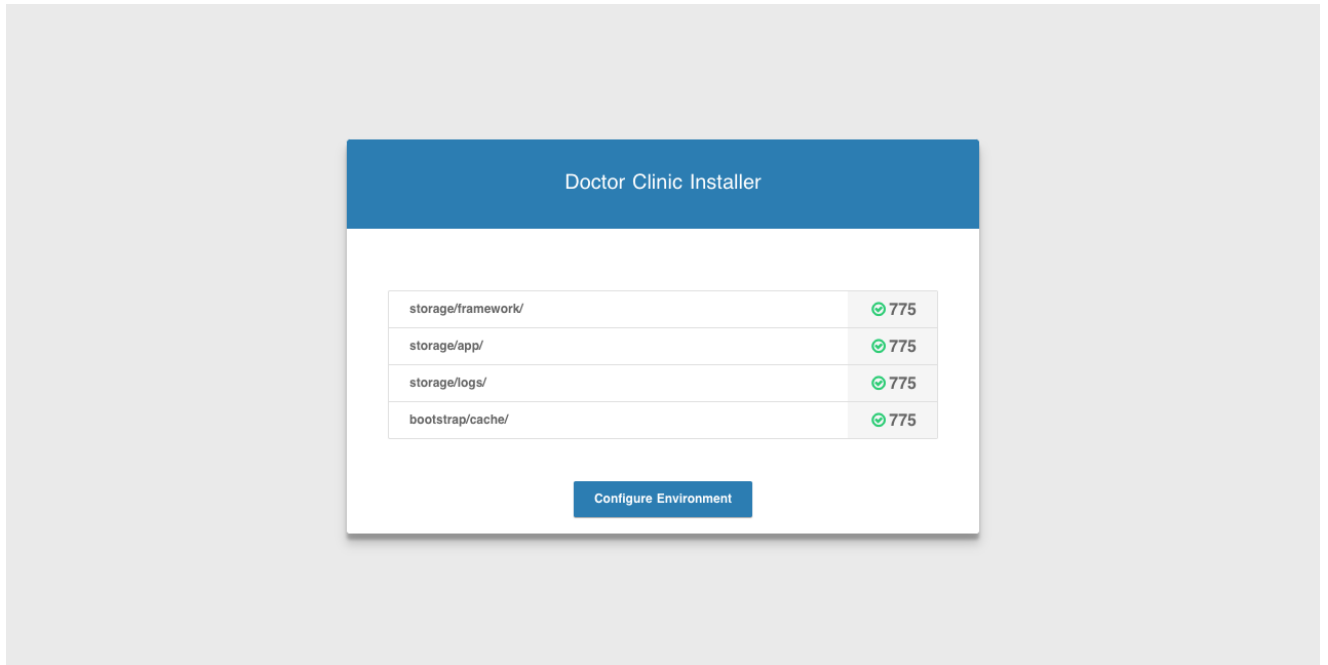

- 4) by pressing start installation installer will move to next step will check the needed php module , version , and server component required

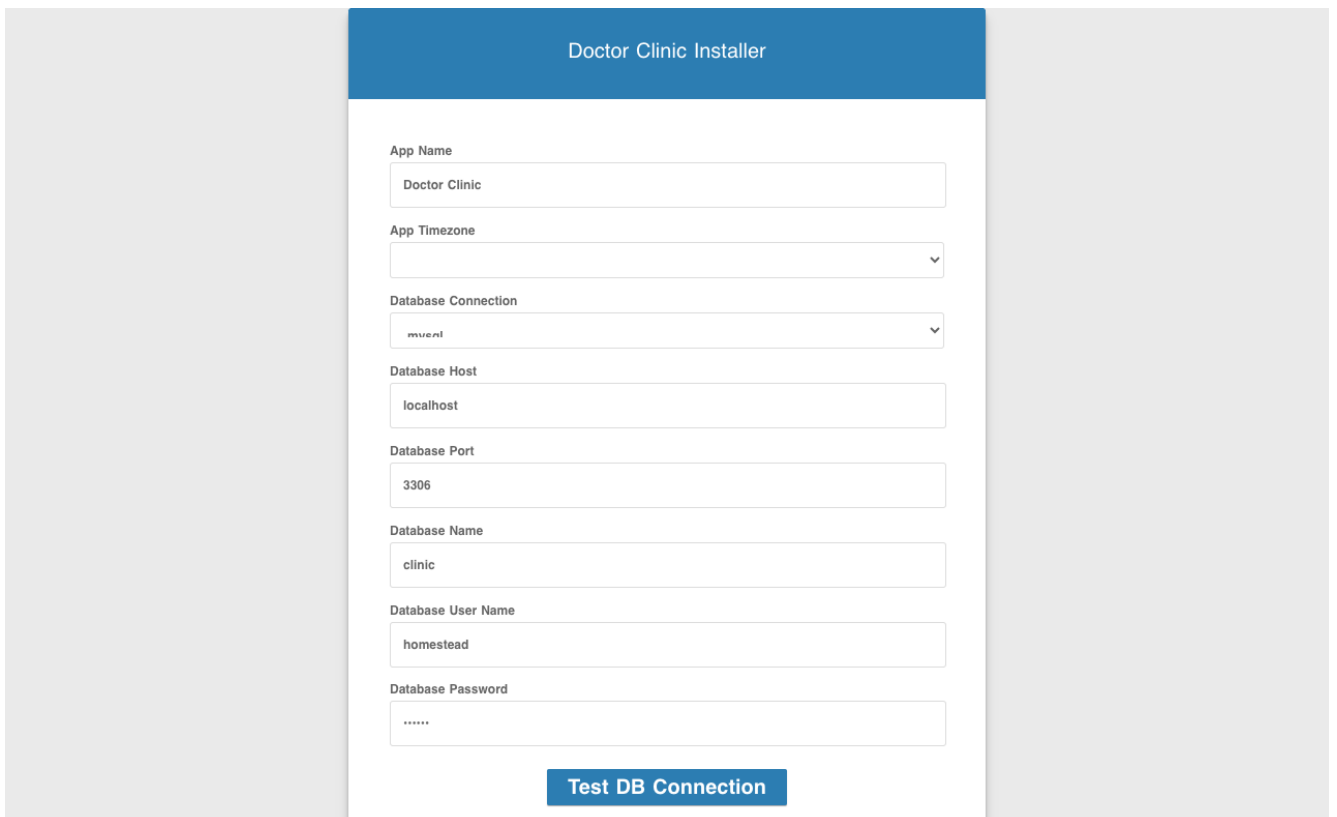

- 5) Once all components are ready , the next step (Checking directories permissions) button will be ready

just click it to start checking

- 6) Once installer check the the needed permission will ready to setup environment variables just click `Configure Environment` to move next step

The screenshot shows the 'Doctor Clinic Installer' window with a form for configuring the application. The form includes fields for App Name, App Timezone, Database Connection, Database Host, Database Port, Database Name, Database User Name, and Database Password. A blue button labeled 'Test DB Connection' is located at the bottom.

App Name: Doctor Clinic

App Timezone: [Dropdown]

Database Connection: mysql [Dropdown]

Database Host: localhost

Database Port: 3306

Database Name: clinic

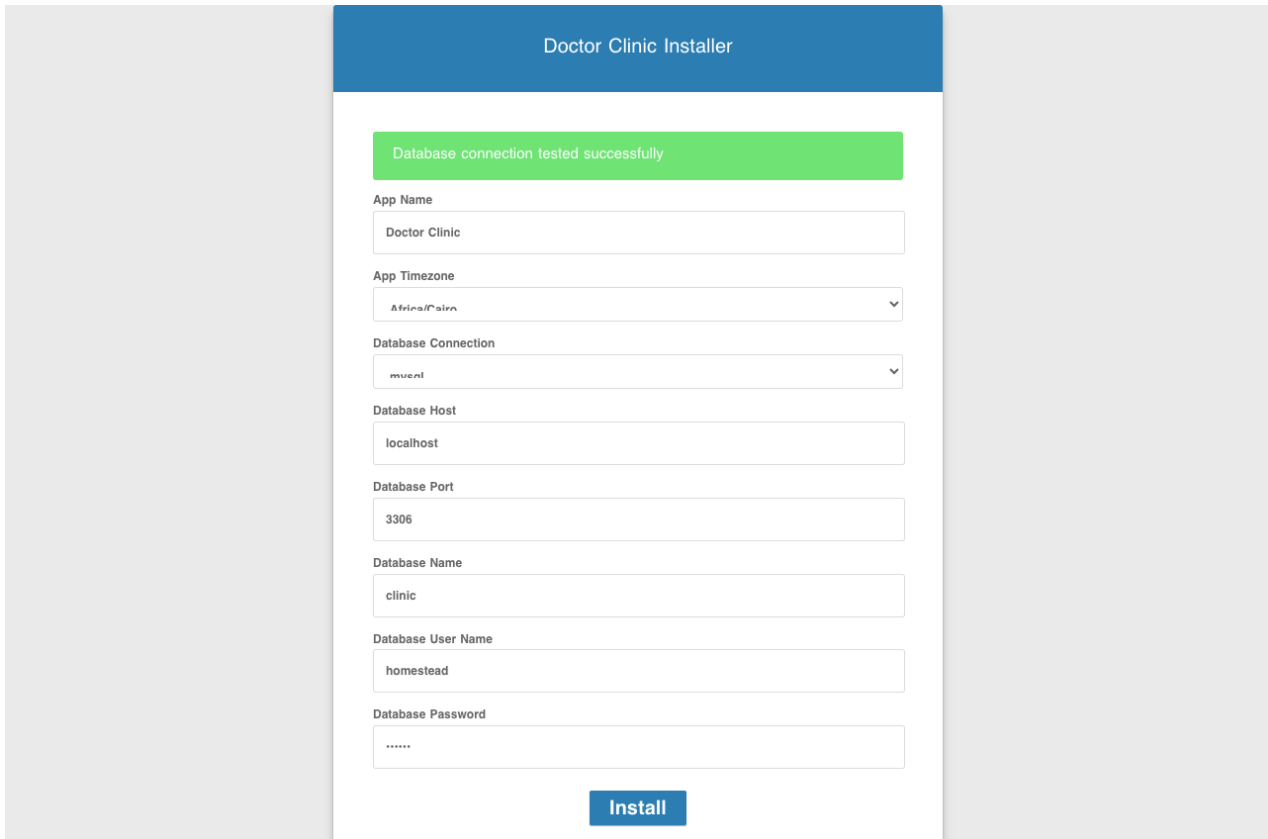

Database User Name: homestead

Database Password: [Masked]

Set Database details and app name then click **Test DB Connection**

Note: Database not create automatically so you need create database manually

7) When database connection is successful it will go to install page

The screenshot shows the 'Doctor Clinic Installer' window. At the top, a blue header bar contains the text 'Doctor Clinic Installer'. Below this, a green success message box states 'Database connection tested successfully'. The main area contains several form fields for configuration: 'App Name' (text box with 'Doctor Clinic'), 'App Timezone' (dropdown menu with 'Africa/Paris'), 'Database Connection' (dropdown menu with 'mysql'), 'Database Host' (text box with 'localhost'), 'Database Port' (text box with '3306'), 'Database Name' (text box with 'clinic'), 'Database User Name' (text box with 'homestead'), and 'Database Password' (password field with masked characters). At the bottom center, there is a blue 'Install' button.

8) click install to finalizing installation

9) Installer will redirect you to the login page you can use admin credentials as
